ALLUSLATE™  
aluminium cladding

**Alluslate™ is a large format wall cladding, created with the aim of decorating interior spaces, either commercial or residential.**

**These panels are decorated by means of a printing system that achieves a high quality image, and are subsequently protected by a highly resistant coating for their conservation.**

**They are available in 2 different finishes: the textured finish (Matt) which can be machined and folded using simple techniques and cold bending, and the glossy finish (Glazed) which can be machined.**

**This material is intended for use in cladding, equipment or furniture, giving the space endless possibilities.**

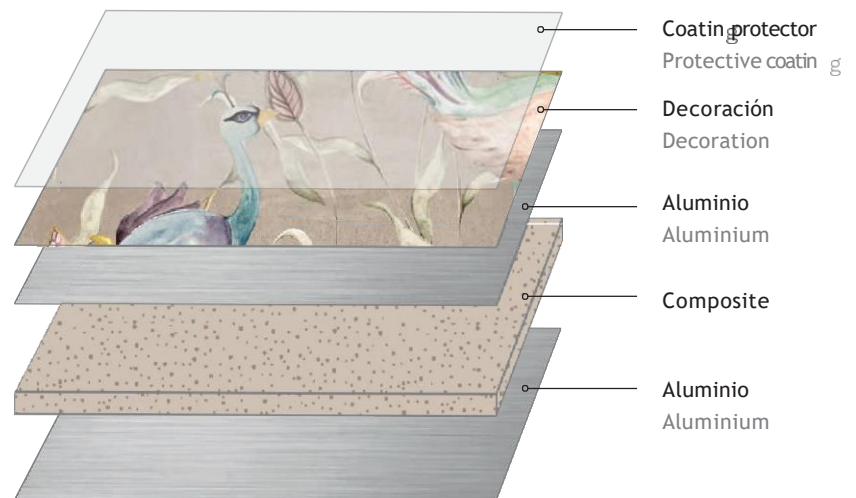

**Alluslate™ consists of a base panel composed of two front and rear aluminium sheets and a core of low density thermoplastic resin with a fire retardant mineral filler, the final panel thickness being 4mm.**

**The front side is printed by means of a digital printing system using high performance inks. Prior to printing, the surface is treated to prepare it for printing in the best technical conditions. This ensures a good fixation of the inks, obtaining a defined, high-resolution graphic.**

**1200 x 2600 x 4 mm • 7kg/m<sup>2</sup>**

**Posibilidad de reciclaje.**  
**Possibility of recycling.**

**Matt**

**After the graphic printing, a technical coating is applied which will ultimately provide the surface with high technical performance and by means of which the panel finish is obtained. (Matt or Glazed).**

**Glazed**

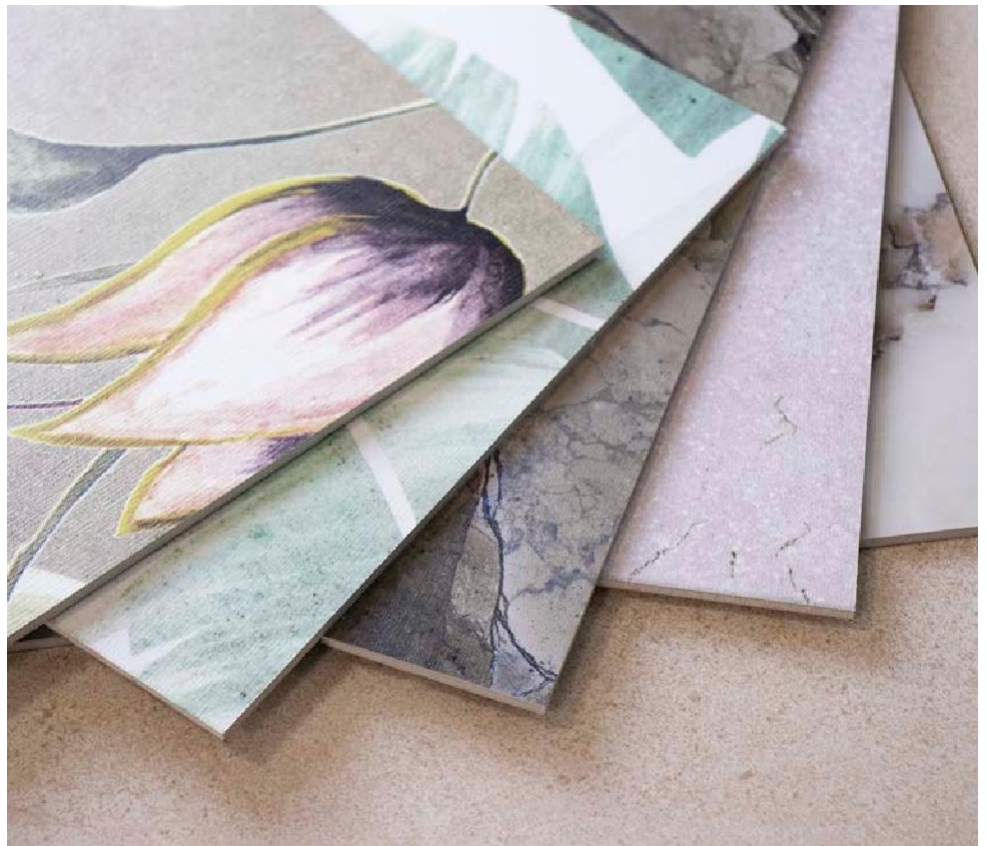

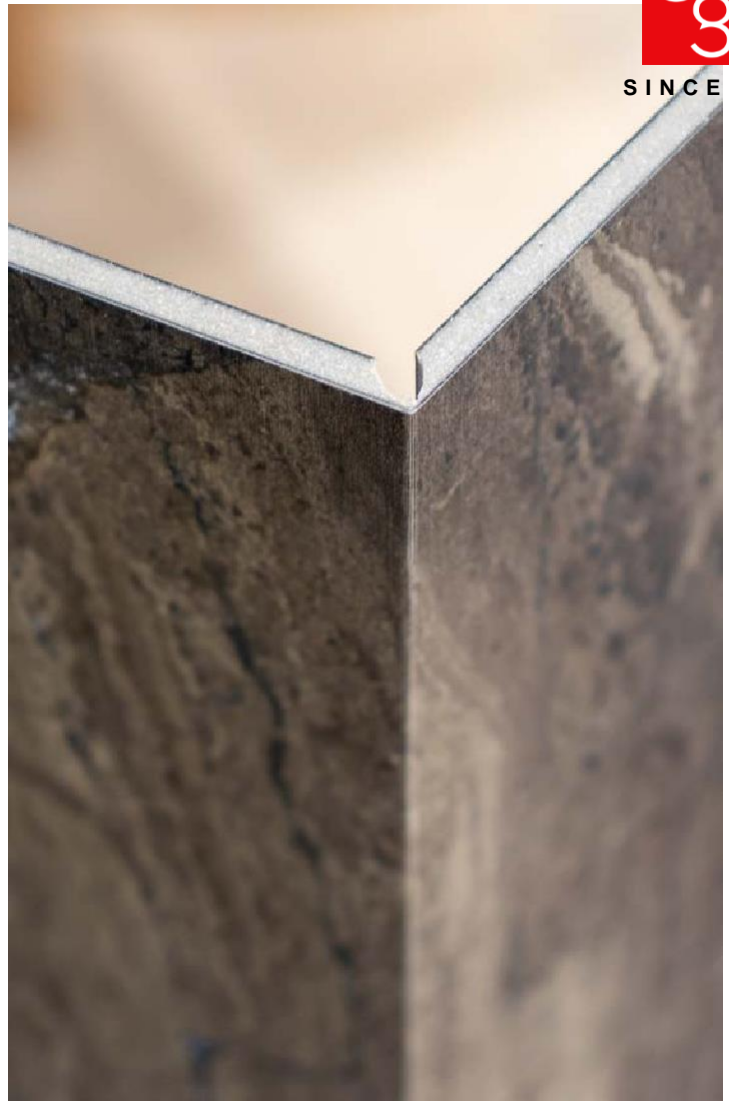

**Resistant and easy-to-clean material.**  
**Resistant to both damp and contact with water, with easy maintenance against everyday stains.**

**Low weight and large area.**  
**Easy to transport and install due to the low weight of the panel. In addition, it saves time during installation as it covers a large area.**

**Wide variety.**  
**Wide range of decoration possibilities and additional technical features. Variety of image for the same model, avoiding repetitiveness of designs.**

**Simple machining.**

**Machining is carried out with tools specific to the metal carpentry sector. Cold bending is permitted using simple techniques (for Matt finishes only).**

**The possibility of machining both in the workshop and on site in an easy way makes it possible to carry out renovations quickly. No dust produced during cutting.**
