Fitwall® panels are decorative coverings which can recreate textures and volumes with great realism to the eye and to the touch. Designed for covering vertical facings of walls, units and commercial and residential fittings, they can also be installed on ceilings and horizontal coverings such as non-functional decorative elements.

The composition of the panels has been developed exclusively by Krion Porcelanosa Group. This material contains a large quantity of minerals, bonded with resin which incorporates recycled PET. Thanks to this composition, Fitwall® offers good safety performance in fire resistance, impermeability and low emission of volatile organic compounds.

Fitwall® panels are produced from a unique mixture of different materials. The balance between these elements is decisive for achieving the maximum performance in their use.

In their composition, Fitwall® panels incorporate a mineral load of over 50% with a high technical value, which contribute distinctive properties with regard to:

- Reduced use of resin in manufacturing.
- Improved flame retardant properties of the panel.
- Resistance and flexibility throughout the panel.

MINIMUM 3% RECYCLED CONTENT POST INDUSTRIAL AND/OR POST-CONSUMER

SCS Global Service, a leading North American independent entity in environmental certifications, has verified that Fitwall® panels contain a minimum of 3% PET in their composition, largely from recycled plastic waste, thereby demonstrating commitment to more sustainable and environmentally friendly production.

Finally, the inorganic pigments, acidic enamel and water-based dyes give Fitwall® panels a great natural appearance.

Fitwall® panels have a careful aesthetic based on original creations and also present a series of attractive properties that provide them with the functionality to stop being just a decorative panel, such as impact resistance, fire resistance, repairability and non-porousness. In addition, it contributes as an acoustic insulator and protector.

At Krion Porcelanosa Grupo, our mission is to create design products that meet the quality requirements of today's market, that are technologically advanced and that are also linked to values associated with sustainability. We understand sustainability as a rational system by which we minimize the use of resources, opting to use recycled materials and low energy consumption, offering the market durable and repairable products. We want to be a part of the chain that promotes the circular economy, basing our purpose on the research and development of new solutions.

For the manufacture of the Fitwall® panels, Krion Porcelanosa Grupo S.A.U. has committed to rational sustainability through EPUPR technology, and is a pioneer in the use of a resin with an exclusive formulation.

This incorporates recycled polyethylene terephthalate (PET), contributing to minimising the consumption of the planet's natural resources.

Fitwall® panels are designed to cover walls, ceilings and furniture, creating different and attractive spaces in an easy way.

Fitwall® panels come in different finishes and colors, but if you do not find the one that suits your space, Fitwall® has the Raw White finish that is ready to be painted the color you want.

Krion recommends that Fitwall® panels are installed by a qualified professional, as described in the installation manuals, which is vital for a correct and durable installation.

For the installation of Fitwall® panels, accessory materials such as fillers, paints or dyes are used. If you have any doubts, please consult the specific data sheet of each model.

wave

Subtle and delicate forms create Wave, a panel of contrasts combining smooth curves with the texture of details. Wave creates sophisticated and timeless spaces, seeking care for detail in each element.

Design created by Estudi{H}ac.

faq's

What is Fitwall® used for?

Covering:

Ceilings Walls Units

Where can it be installed?

Interior

On what type of support can it be installed?

Plasterboard Brick Wood

Does the support where the panel will be installed have to be prepared in any way?

The substrate must not be treated with any product. It must be ensured that the wall is flat, as it may be irregular.

Is it necessary to carry out works for the installation of this type of panel?

It is not necessary to carry out works due to installation being with mechanical fixings, that is, screws and blocks, depending on the substrate, and installing on an existing substrate.

Does installation take a long time?

Due to the size of the panels, a larger area is covered in a shorter time, therefore making the installation time relatively short. Full renovations may be carried out in a much shorter time than with other materials existing on the market.

Can it be curved?

It must be known that the panel adapts to the substrate where it will be installed. It is therefore possible to create curves, always taking into account the curve radii specified in the installation datasheets of each panel.

Does cleaning require any special product?

No, scrubbers and fabric cloths must be avoided, as they are rough materials which damage the surface of the material. We paper is used to eliminate the excess, a little soap, and a cloth to clean and dry the surface.
